From the Field to the Global Yachting Agenda

As we prepare the 60th issue of Yacht News Türkiye as a special Cannes Yachting Festival edition, we take a broad look at Türkiye's position in the global superyacht industry, from construction and design to engineering and collaborations.

Meral ER
Editor in Chief

Türkiye is today one of the world's leading yacht-building centres. Projects taking shape across various production hubs, particularly in Antalya, Bodrum, Istanbul and Izmir, are increasing the international visibility of Turkish shipyards, design studios, engineering companies and specialist suppliers. At Yacht News Türkiye, we follow the development of this ecosystem from the field, bringing Türkiye's production capabilities and emerging areas of value to the international yachting agenda.

Superyacht Summit Türkiye, featured on the cover of this issue, is a strong reflection of this approach. In a short time, the summit has established a distinctive position within the international superyacht calendar, turning Istanbul into an important meeting point for global industry professionals. Its value extends beyond the diversity of topics covered; it lies in creating a communication network that brings together different disciplines, markets and professionals.

In our cover interview with Oğuz Bilgin, founder of Superyacht Summit Türkiye, we discuss the approach behind the summit's brand value, its ambition to create an international community, and how changes within the superyacht industry are reflected in new forms of collaboration. The interview offers a different perspective on Istanbul's role in the global superyacht ecosystem and Türkiye's strengthening position within this network.

In our interview section, our conversation with BAZ Yacht Design focuses on Türkiye's growing international presence in the field of yacht design. With Bilge Zaptçioğlu Atal and Barbaros Atal, we discuss their design language through the REN62 and ILIAD 53F OffGrid Hybrid projects, their working models extending from Antalya to Europe, the position of Turkish design studios in the global market, and the transformation yacht design is likely to undergo over the next decade.

In the Craftsmanship & Innovation section, we turn our attention to AvA Yachts' Kando 85 project. We examine this explorer yacht project through its design, engineering, materials and production approach, taking a closer look at the production culture behind a high-quality superyacht project developed in Türkiye.

On The Bulletin pages, we follow the latest developments across the industry. New projects, investments and production activities in Türkiye, together with developments in international markets, come together in this section through stories reflecting different layers of the sector.

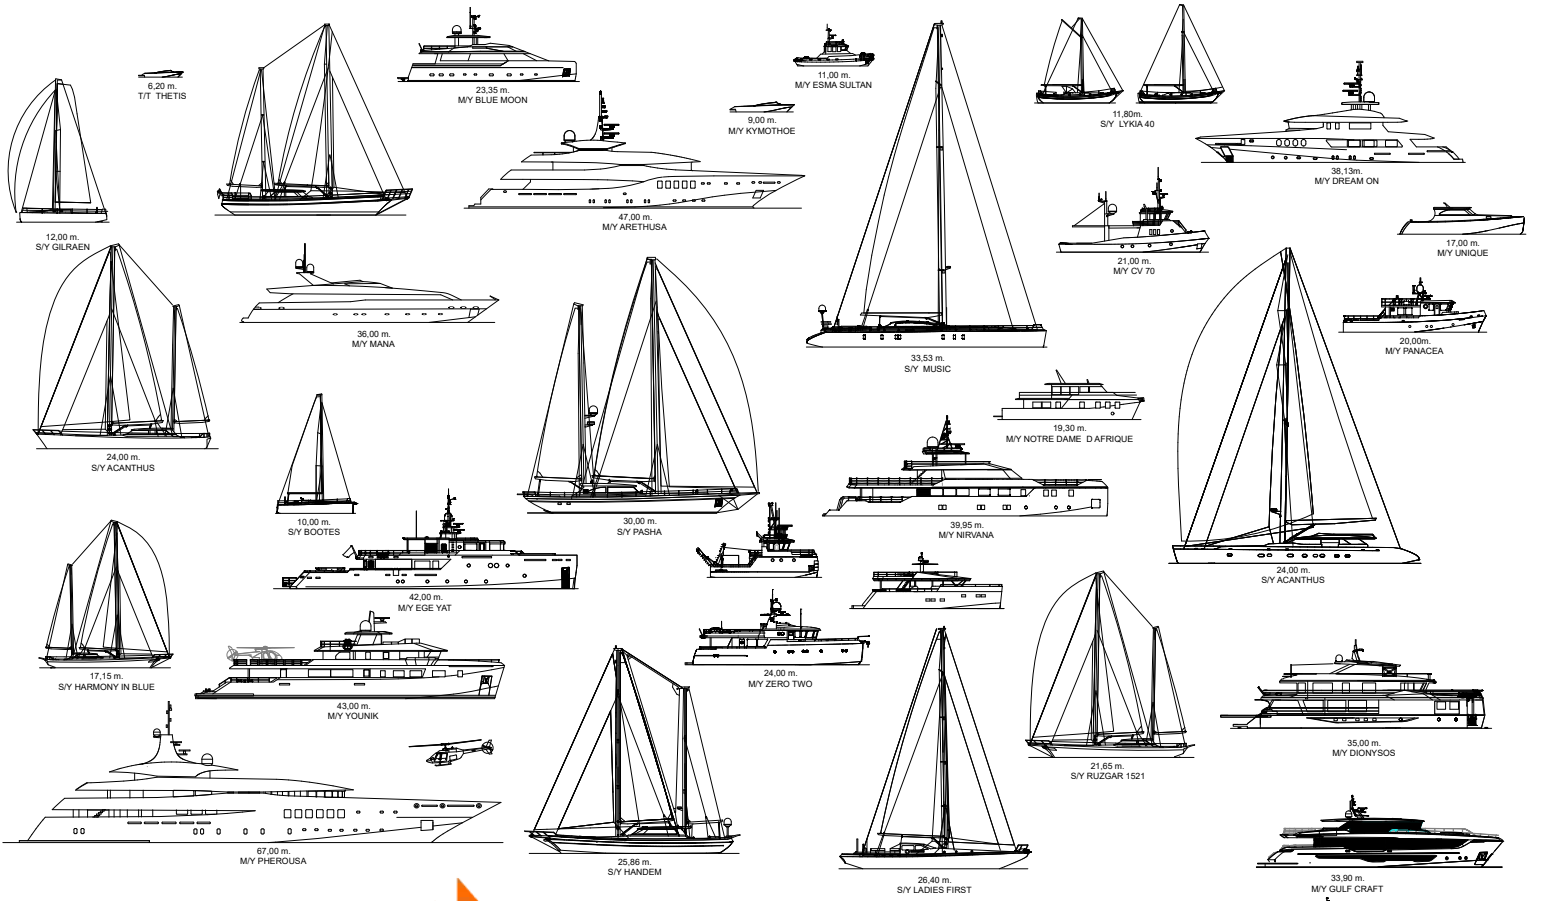

The international setting of the Cannes Yachting Festival provides a strong platform from which to view developments across Türkiye's yachting ecosystem from a broader perspective. As much as the projects and technologies on display, the relationships between builders, designers, investors and service providers are shaping the future direction of the industry.

The editorial direction of Yacht News Türkiye is clear: to follow developments in Türkiye from the field, to make the engineering expertise and craftsmanship behind production visible, and to bring this value to the global yachting agenda.

In our 60th issue, we look at Türkiye's production and design capabilities, its expanding professional networks and the new directions of the superyacht industry through the international showcase of Cannes.

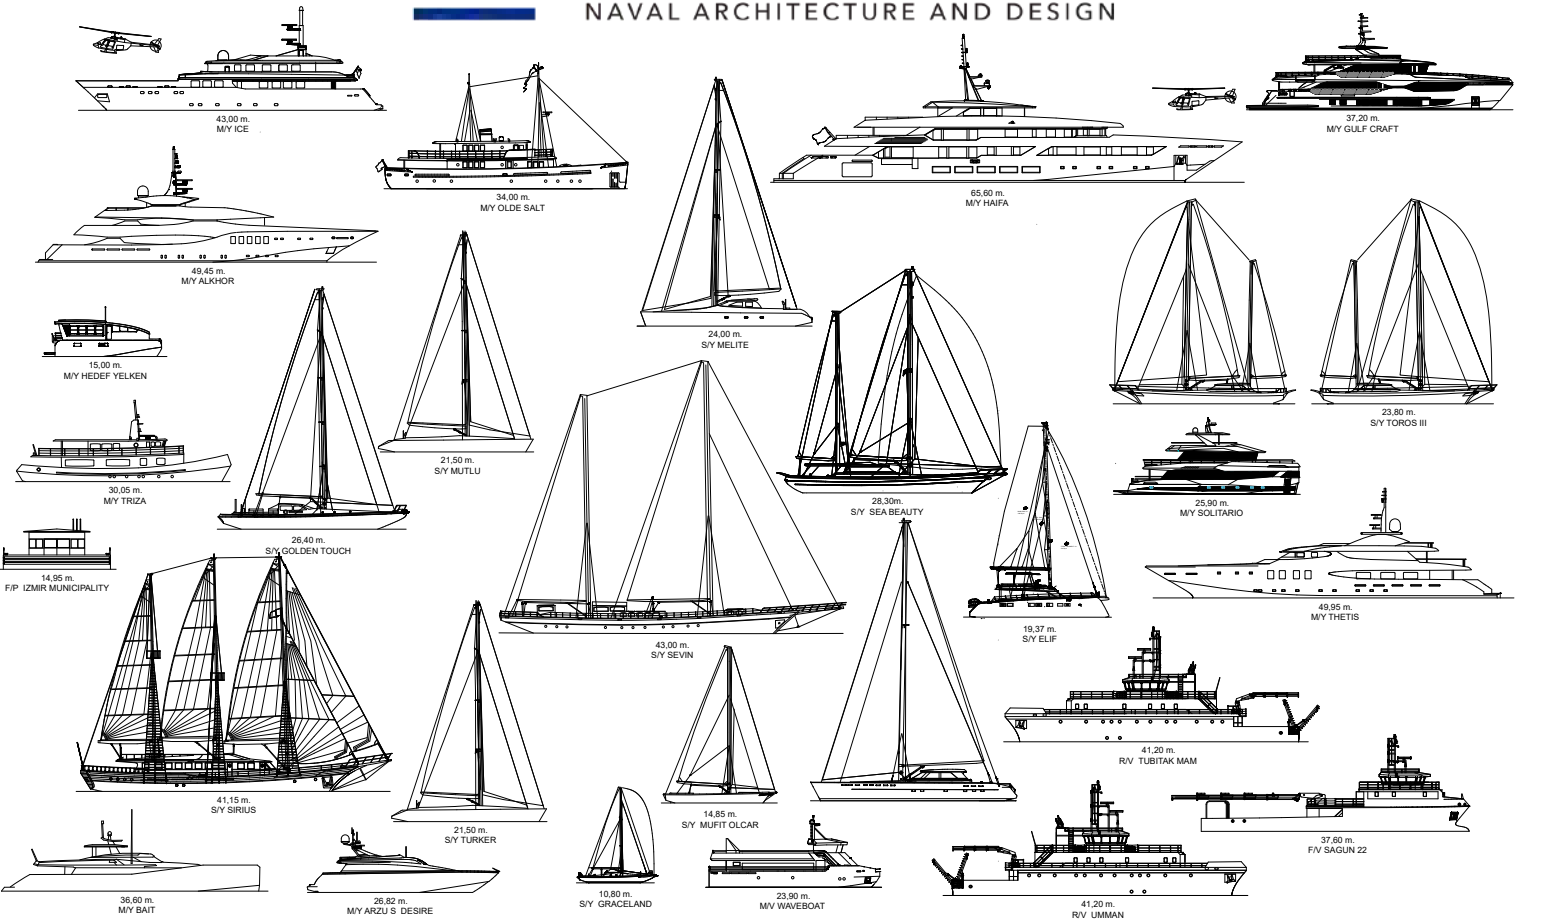

Enjoy the read.

Where Your Exploration Begins

AvA Yachts' Kando 85 redefines the explorer yacht concept through not only long-range capability, but also living space, quietness and production discipline. Developed in Antalya, the 25.7-metre M/Y V represents the latest expression of the shipyard's more than two decades of engineering experience and in-house production culture, and will make its world debut at Cannes and Monaco this autumn.

The character of an explorer yacht is defined by more than how far it can travel. What truly matters is how that distance is experienced.

AvA Yachts' Kando 85 provides a clear answer to this question. Measuring 25.70 metres, M/Y V combines long-range cruising capability with generous living spaces, low noise and vibration levels, a four-deck architecture and a craftsmanship approach shaped largely within the shipyard's own production infrastructure.

This approach begins at AvA Yachts' 5,000-square-metre production facility in Antalya Free Zone.

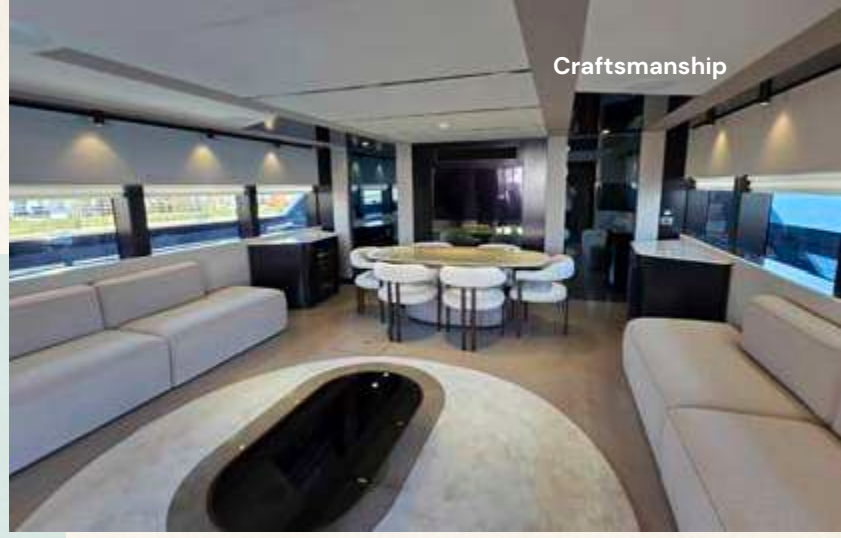

The engineering philosophy behind the Kando 85 has been shaped by more than three decades of experience of AvA Yachts founder Atilla Küçükdkiker. The shipyard, which he founded in 2005, today operates as an independent builder focused on long-range explorer yachts. From furniture and upholstery to stainless steel fabrication, mechanical assembly and painting, most of the production is carried out by AvA Yachts' own teams.

Under this production model, design, engineering and construction progress under one roof. Küçükdkiker's assessment of M/Y V points directly to the heart of this approach:

"Drawing a yacht is one thing; bringing it to the sea exactly as you designed it is another. When I stand on M/Y V's deck and look towards the horizon, I feel the pride of more than two decades of work, the craftsmanship of every one of our artisans in Antalya, and Turkish engineering all at once."

The Kando 85's technical architecture directly reflects AvA Yachts' explorer philosophy. Its combination of an AH36 steel hull and 5083 aluminium superstructure forms the foundation of a design intended for ocean crossings. CE Category A-certified M/Y V offers a range of more than 5,000 nautical miles at a cruising speed of 9 knots in sea trials, increasing to as much as 12,000 nautical miles at economical passage speed. Its 24,000-litre fuel capacity further supports extended cruising scenarios.

Four full decks and 200 GT of volume within a 25.70-metre hull underline the Kando 85's emphasis on living space. The characteristic architecture of the Kando series provides generous interior volume compared with more conventional three-deck layouts of a similar length.

The full-beam master cabin on the main deck features panoramic windows that make the surrounding seascape a central element of the interior experience. Four guest cabins accommodate eight guests, while the forward-deck Jacuzzi and outdoor living areas encourage time spent outside during long passages.

In terms of comfort, AvA Yachts focuses on measurable performance. Measurements conducted by an independent accredited laboratory recorded approximately 50 dBA of noise in the main cabin while underway. Vibration levels in the living areas were also measured below the threshold of perception.

These results demonstrate that the Kando 85's approach to comfort is defined by more than materials and volume. Zero-speed stabilisers and dual Starlink connectivity further complete the yacht's technical infrastructure for extended periods at sea.

The 23.90-metre load-line length offers another operational advantage. Depending on flag-state regulations, this configuration allows the yacht to be managed by its owner, providing flexibility in determining the crew structure according to usage preferences.

The Kando 85 story does not end with M/Y V. AvA Yachts' delivered superyachts include M/Y Lady Caroline from the 33.5-metre Kando 110 series and M/Y Infinity Nine, delivered in 2021. Infinity Nine is among the projects certified under the Monaco Yacht Club's SEA Index environmental efficiency measurement system.

At the shipyard's current production line, the Kando and Voyage families are progressing side by side. The third Kando 110, M/Y Helene; Kando 85 Hull #2, the sistership to M/Y V and available for sale; and the first two hulls of the fully aluminium Voyage 90 series are currently under construction.

These two series also highlight the distinction within AvA Yachts' product strategy. The Kando family focuses on long-range explorer cruising through its steel hull, four-deck configuration and generous volume, while the Voyage series offers a lighter and more efficient character through its fully aluminium construction and three-deck architecture.

Küçükdiker's vision for the future encompasses not only the development of the existing product range but also a new architectural approach. The shipyard is working on new models that will combine steel hulls and aluminium superstructures within a three-deck design.

"We build the yacht around the owner, never the other way around. In the coming period, we are expanding this philosophy with a new chapter: very soon, we will introduce new three-deck models featuring steel hulls and aluminium superstructures. Measurable comfort and efficiency will continue to be our standard across every yacht in the range."

This approach has two fundamental pillars: measurable comfort and long-term efficiency. AvA Yachts aims to carry this standard into future projects by monitoring noise and vibration levels through independent laboratories. On the environmental efficiency side, the shipyard is also considering the wider use of measurement systems such as the SEA Index across its product range.

Low consumption and long range, both fundamental to the explorer concept, will also guide future technology choices. Hybrid and diesel-electric propulsion configurations are being evaluated for new projects as the technology matures.

M/Y V's next destination will be the international yachting showcase of the Mediterranean, following her construction at AvA Yachts' Antalya facility. The Kando 85 will make her world premiere at the Cannes Yachting Festival from 8–13 September, followed by an appearance at the Monaco Yacht Show from 23–26 September.

In Cannes, she can be visited at Vieux Port - Jetée Nord 208, Berth 032; in Monaco, at Quai Jarlan, Stand QJ16, Berth J01.

The Kando 85 also offers a broader perspective on where the explorer concept stands today. When long range, generous volume, quietness, efficiency and production quality are considered as different outcomes of the same design philosophy, M/Y V establishes a character of her own.

Developed by AvA Yachts in Antalya, the Kando 85 stands out as a contemporary project that brings Türkiye's manufacturing capabilities to the global long-range explorer segment, supported by measurable engineering standards.

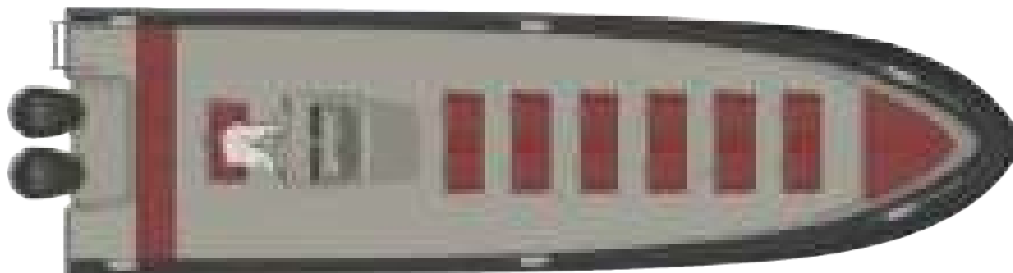

Jerfi 38 XP Expands Mercan Yachting's Commercial Boat Range

Capacity, operational efficiency and operating economics are among the key criteria in the design of platforms developed for commercial passenger transportation. Mercan Yachting's new Jerfi 38 XP stands out as the latest addition to the company's commercial boat portfolio, featuring an optimised hull structure and a redesigned deck layout.

Based on the Jerfi 38 platform, the new model has been developed with a lighter structure and an updated deck arrangement tailored to the requirements of shuttle operations. A spacious luggage compartment, dedicated storage areas for each passenger and an ergonomic seating layout are designed to enhance operational efficiency in high-passenger-turnover environments.

A washbasin and toilet integrated into the console further improve passenger comfort, particularly during longer transfer routes and day-trip commercial operations. The boat's modern and robust styling, wide side decks, expansive sunshade system and functional deck plan have been designed to facilitate movement on board for both passengers and crew.

Built in accordance with CE Category B standards, the Jerfi 38 XP is suited to offshore operations, combining a seaworthy hull form with balanced handling characteristics. Optimised weight distribution and a lightweight platform structure contribute to reduced fuel consumption while supporting overall operating efficiency.

Developed for sightseeing excursions, VIP transfer services, inter-island passenger transport and shuttle operations, the Jerfi 38 XP brings together capacity, durability and operational efficiency in a single platform, further strengthening Mercan Yachting's commercial boat offering.

Mengi Yay Launches 52-Metre Amphib II

Mengi Yay has launched NB116 – Amphib II, the latest addition to its custom superyacht portfolio, at its Tuzla shipyard. Measuring over 52 metres in length, the steel-hulled superyacht has entered the commissioning and testing phase ahead of delivery, showcasing the shipyard's continued expertise in bespoke yacht construction.

Amphib II represents the newest member of Mengi Yay's growing series of custom-built superyachts. Designed by VYD Studio, with naval architecture by Van Oossanen Naval Architects, the yacht combines a steel hull and aluminium superstructure on an efficient platform that remains below the 500 GT threshold.

Developed with a long-range cruising concept in mind, the yacht is capable of supporting transatlantic passages. With fuel capacity of approximately 65,000 litres and fresh water storage of 15,000 litres, Amphib II is positioned among explorer-style superyachts designed for extended voyages. The yacht reaches a top speed of 15 knots, while its economical cruising speed is reported at 12 knots.

Its technical specifications further reinforce this capability. Built to RINA classification standards, the yacht has been developed to meet a range of international certifications, including Unrestricted Navigation, Ice Class 1C, Green Plus, Comfort Class and helicopter landing area certification. These features support not only long-range operations but also enhanced safety, comfort and environmental performance.

Following the launch, Amphib II has entered the final construction phase, which includes outfitting works, systems integration, harbour trials and sea trials. Upon completion of these stages, the yacht is scheduled for delivery to her owner.

SES Yachts Introduces a New Approach to the Explorer Segment with Project Freedom

Istanbul-based SES Yachts is bringing together long-range cruising capability, operational flexibility and highly customisable living spaces in its new 44-metre explorer yacht concept, Project Freedom. Designed by Marco Casali of Too Design, the project is being offered as a fully engineered, ready-to-build platform and is represented for sale by Denison Yachting.

Developed with an all-aluminium hull, Project Freedom reinterprets the traditional explorer yacht concept through a modular approach that can be adapted to different operational and lifestyle requirements. At the heart of the project is the ambition to combine the technical capabilities required for offshore fishing, diving, underwater exploration and global cruising with the comfort expected of a modern luxury yacht.

One of the project's distinguishing features is the availability of three distinct lifestyle configurations built on the same platform. The Fisherman version is centred around outdoor living and sport fishing, while the Fisherman Enclosed configuration features an enclosed wheelhouse designed for extended expeditions and more professional operational use. The Leisure version focuses on family-oriented cruising and social spaces, incorporating a fixed swimming pool, a redesigned beach club and a side-loading tender garage.

A spacious aft deck is among the defining elements of the yacht's operational character. Designed to accommodate a large tender and a range of water toys, the area can be transformed into an expansive pool deck overlooking the cockpit once the equipment has been launched, allowing the space to adapt to different usage scenarios. The beach club is located on the deck below.

From a technical perspective, Project Freedom reinforces its explorer credentials with a range of 4,000 nautical miles at economical cruising speed, a cruising speed of 20 knots and a top speed of 22 knots. Twin 2,400 hp Caterpillar main engines compliant with IMO Tier III regulations, a Zero Speed electric stabilisation system and approximately 400 GT of internal volume form the foundation of the yacht's engineering package.

Accommodation layouts offer either five or six guest cabins, including a full-beam owner's suite located on the main deck. The yacht is designed to accommodate up to 12 guests, while dedicated quarters for seven crew members support extended cruising operations. A spacious main saloon, professional galley, sky lounge and dedicated service areas on the upper deck further enhance onboard comfort during long voyages.

With all engineering work completed and construction ready to commence, Project Freedom offers extensive customisation opportunities, from hull arrangement and deck layout to interior design. This flexibility allows the project to move beyond the boundaries of a conventional explorer yacht, creating a platform that can be tailored to a wide range of operational and lifestyle preferences.

Solenta 27 Brings a Fresh Perspective to the Day Cruiser Segment

The day cruiser segment continues to evolve with models that offer greater living space and enhanced versatility within compact dimensions. Mercan Yachting's new Solenta 27 embraces this approach and is making its appearance before visitors at this year's Cannes Yachting Festival.

With an overall length of 8.40 metres and a beam of 2.80 metres, the Solenta 27 has been developed around a layout that combines day boating with weekend cruising capability. Its hull geometry has been designed to deliver balanced handling characteristics while maximising usable onboard space within a compact footprint.

Open-air living areas are among the defining features of the yacht's social-oriented design. A spacious cockpit layout, ergonomic seating arrangements and a multifunctional table configuration provide flexibility for a variety of onboard activities. The hardtop structure and panoramic glazing enhance visibility while supporting comfort and usability in changing weather conditions. A generous foredeck sunbathing area further complements the deck arrangement.

Below deck, a double berth, enclosed head compartment and dedicated storage spaces enable the Solenta 27 to accommodate short overnight stays in addition to day cruising. This layout concept makes the model a versatile platform capable of appealing to a broad range of boating enthusiasts.

Available with engine options of up to 350 hp, the Solenta 27 has been developed for coastal cruising, offering accommodation for up to ten people and carrying CE Category C certification. Fuel and freshwater capacities have been configured to support this intended operating profile.

On display at the Cannes Yachting Festival, the Solenta 27 offers visitors an opportunity to experience Mercan Yachting's latest design approach and product development philosophy in the day cruiser segment.

Technical Specifications

Sirena Yachts Launches New Flagship

Sirena 118

Sirena Yachts has launched the 36-metre Sirena 118, the largest yacht ever built by the Turkish shipyard, marking a significant milestone in its expansion into the superyacht sector. The new flagship is set to make its world premiere at the Cannes Yachting Festival, showcasing the builder's growing capabilities in design, engineering and production.

Having steadily expanded its range in recent years, Sirena Yachts enters a new size category with the Sirena 118 while further strengthening its position in the international superyacht market. First unveiled at the 2024 Monaco Yacht Show, the model represents the shipyard's most ambitious platform to date, featuring an all-composite construction, a volume below 300 GT and a three-deck layout.

The project brings together expertise from several renowned design disciplines. Sirena Yachts' in-house team led the exterior design development, while naval architecture was created by Germán Frers. Interior design was entrusted to Cor D. Rover, whose approach emphasizes flexible layouts, abundant natural light and highly customizable living spaces.

Sirena 118's living spaces have also been designed with an approach that supports extended stays on board. The owner's suite on the main deck stands out with an alternative layout option spanning two decks, while a private lounge connected to the water level and a fold-down balcony are among the yacht's notable architectural features. On the lower deck, the yacht can accommodate up to 12 guests across four guest cabins and one VIP suite.

For performance, Sirena Yachts has opted for a fast-displacement hull form, paired as standard with twin MAN V12 engines. Depending on the selected engine package, the yacht can achieve a top speed ranging from 16 to 21 knots.

Commenting on the launch, Sirena Marine CEO Çağın Genç described the Sirena 118 as a reflection of the company's highest level of engineering and manufacturing achievement to date. He also expressed his enthusiasm about presenting the new flagship to international industry professionals at the upcoming Cannes Yachting Festival.

Sirena Yachts' growth ambitions extend beyond the Sirena 118. The shipyard is also continuing work on a new 42-metre superyacht under construction in Yalova. Developed in collaboration with Luca Vallebona and Hot Lab, the project represents the next step in Sirena's strategy to establish a stronger presence in the larger superyacht segment.

Torlak Shipyard Expands New-Build Portfolio with 45-Metre Superyacht Project NB83

Torlak Shipyard is expanding its new-build portfolio with NB83, a 44.85-metre superyacht currently under construction. The project is scheduled for launch in January 2027, with delivery planned ahead of the 2027 Mediterranean summer season.

Featuring exterior styling and interior design by Hot Lab, NB83 has been engineered by Torlak Shipyard's in-house team. Built with a steel hull and aluminium superstructure, the 482 GT yacht has been designed with long-range cruising and charter operations in mind.

The interior layout has been developed to support extended stays on board. A full-beam owner's suite located on the main deck provides a private retreat complete with a dedicated office, walk-in wardrobes and a split en-suite bathroom. Accommodation is arranged for up to 10 guests across four additional cabins on the lower deck, comprising two VIP staterooms and two twin guest cabins. Dedicated quarters for 11 crew members further support the yacht's operational efficiency and charter capability.

NB83's technical platform has been developed with long-range cruising as a key priority. Powered by twin MAN engines delivering a combined output of 2,900 hp, the yacht is expected to reach a top speed of 16 knots and offer a cruising speed of 13 knots. With an anticipated range of 4,000 nautical miles at economical speed, NB83 is designed for voyages extending well beyond the Mediterranean.

Outdoor living spaces include a spacious main aft deck, a generous upper deck and a sundeck featuring a Jacuzzi. A large swim platform and beach club enhance the connection to the water, while a dedicated tender garage and additional open-deck storage areas provide space for tenders and water toys.

Built to RINA class standards and compliant with Unrestricted Charter requirements, NB83 is also being constructed in accordance with the Malta Commercial Yacht Code applicable to yachts under 500 GT. This certification framework is intended to provide the flexibility required for both private ownership and commercial charter operations.

Soyaslan's 35-Metre Lointaine Puts Accessibility at the Heart of Yacht Design

Soyaslan's NB84 project, M/Y Lointaine, takes spatial planning, accessibility and private living spaces beyond conventional solutions on its 35-metre platform. The 328 GT custom superyacht stands out with its steel and aluminium construction, three separate elevator systems and a 30-square-metre master study located on the main deck.

Soyaslan's new-build project, M/Y Lointaine, draws attention with its architectural approach, bringing together different usage scenarios within a 35-metre platform. Developed as NB84, the yacht's naval architecture and concept design were undertaken by Soyaslan, while the exterior design is by Calm Design.

Measuring 35.00 metres in length with a gross tonnage of 328 GT, Lointaine combines a steel hull and aluminium superstructure with contemporary exterior lines. The character of the project is shaped not only by its exterior appearance, but perhaps even more distinctly by the way its interior spaces are configured.

The 30-square-metre master study on the main deck is one of the most striking examples of this approach. Positioned directly behind large forward-facing observation windows, the space connects to the outdoors through a 6-square-metre balcony on the starboard side. The panoramic views over the yacht's forward section turn the study from a conventional office into an integral part of the cruising experience.

Another defining feature of Lointaine's architecture is accessibility. The yacht has been designed to be fully wheelchair-accessible, with three separate elevator systems providing movement between different decks.

The main 2-square-metre elevator connects four decks, from the lower deck to the sundeck. A second elevator links the aft platform with the main deck, while the third provides direct access from the main deck to the sundeck for emergency use.

This vertical circulation system has been considered as part of the yacht's overall layout. Guest corridors and exterior passageways are designed to be at least one metre wide, with the aim of enabling uninterrupted movement between decks. Accessibility therefore becomes an integral architectural decision rather than an equipment solution added at a later stage.

Lointaine's living spaces are also shaped around highly private usage scenarios. The yacht accommodates 12 guests across six cabins, while five crew cabins provide accommodation for 10 crew members. Located on the bridge deck, the 70-square-metre Owner's Deck forms the yacht's most private living area.

The deck features a master lounge aft, his-and-hers bathrooms, and a 22-square-metre master bedroom and dressing area forward. The interior layout has been developed directly around the owner's requirements, creating a highly personalised living environment.

Soyaslan's engineering approach is also reflected in the yacht's performance specifications. Lointaine carries the RINA Charter Yacht, Unrestricted Navigation class notation. More comprehensive data on propulsion and range performance is expected to emerge following the upcoming sea trials.

“ This long journey successfully culminated in a flawless launching operation. Our initial technical observations show that the yacht is fully aligned with our design parameters. ”

Can Soyaslan **Yacht Designer & Partner at Soyaslan Design**

The launch of Lointaine brings the design and engineering decisions behind the NB84 project into physical form, introducing a different approach to accessibility and spatial utilisation within the 35-metre custom superyacht segment. Its three-elevator accessibility system, forward-facing master study with expansive views and independent Owner's Deck bring the project's core design decisions together around a common principle.

Reviva Refit's Mirabella Project Returns to the Mediterranean

The 47.9-metre Trinity motor yacht is preparing for the charter season following an eight-and-a-half-month refit programme completed at Reviva Refit's Tuzla facility.

Carried out under project code R15, the programme covered a broad range of work, from the yacht's exterior appearance and technical infrastructure to interior woodwork and deck areas. It also marked the 15th major refit project completed by Reviva Refit since 2017.

Mirabella arrived in Tuzla in mid-September 2025 and was hauled out in early October. The contractual delivery date was set for 15 July 2026, and the schedule was maintained throughout the eight-and-a-half-month project period. Rob Dolling of Verpeka Dolling Superyachts served as the owner's representative and technical manager, while Reviva Refit teams and specialist suppliers coordinated the extensive work programme involving multiple technical disciplines running simultaneously.

The yacht's hull and superstructure were completely stripped and repainted. A significant portion of the electrical and electronic infrastructure was renewed, while the audiovisual systems and bridge electronics were also included in the scope of work. The interior lighting was redesigned, while exterior deck lighting was upgraded to better support the yacht's living and operational areas.

The effects of Mirabella's more than 20 years of service were particularly visible on the varnished wood surfaces throughout the interior. Rather than applying new layers over the existing finish, surfaces affected by sun, salt, and humidity were stripped back completely to bare wood and refinished. The walnut surfaces were finished in a new treatment that emphasizes rich, dark chocolate tones.

This approach was chosen with the aim of preserving the character of the original interior designed by Scott Carpenter. Upholstery was renewed, while furniture in the guest and owner areas was refurbished or replaced. Interior flooring and marble applications were also included in the refit programme.

Changes to the exterior living areas were among the key interventions reshaping Mirabella's onboard experience. The sun deck was redesigned and fitted with a custom-built Jacuzzi, while new exterior seating areas were created across all decks. The swim platform was also reconfigured around an integrated transformer. This modification required structural changes to the aft section and the creation of a separate watertight compartment to accommodate the transformer.

On the technical side, the project included a stabilizer overhaul, main engine maintenance, and replacement of the generator exhaust outlet. The teak decks were renewed, while the galley underwent a comprehensive refurbishment. The yacht's logo and name design were also revisited as part of the project.

Ramazan Mengi, Operations Manager at Reviva Refit, notes that project R15 stood out for bringing together painting, systems, woodwork, and structural works within the same programme. He emphasizes that managing multiple areas of expertise within a single winter season while maintaining the agreed delivery date was one of the project's key operational objectives.

Mengi also views Mirabella's transformation as a reflection of Reviva Refit's overall approach:

"Mirabella is leaving Tuzla as a genuinely different yacht; this is exactly the standard we aimed for when establishing Reviva."

Rob Dolling, the yacht’s owner’s representative and technical manager, also highlights the fact that the scope of work involved almost every major technical discipline on board. He notes that direct access to specialists ranging from mechanical and electrical teams to interior carpenters made it possible to execute such an extensive programme within a single winter season.

Following her refit, Mirabella accommodates 11 guests in five cabins. Four cabins feature king-size beds, while one cabin is configured with an additional Pullman berth. The yacht accommodates a crew of nine and is powered by two Caterpillar 3512B main engines, reaching a maximum speed of 18 knots and a cruising speed of 12 knots, with a range of 3,500 nautical miles at 12 knots.

Mirabella’s comprehensive refit at Reviva Refit has brought the technical infrastructure and living spaces of a more than 20-year-old Trinity motor yacht in line with contemporary operational and lifestyle expectations. With the yacht now returning to the Mediterranean charter market, the investment in the refit is directly connected to extending and enhancing her commercial service life.

Completed in Tuzla, the R15 project also demonstrates Türkiye’s growing capability to manage high-volume, multidisciplinary, and schedule-sensitive refit operations, further strengthening the country’s position in the international yacht refit market.

M/Y Mirabella - Technical Specifications

Builder	Trinity Yachts, USA
Year Built	2004
Length Overall	47.9 m
Beam	8.51 m
Draft	2.36 m
Gross Tonnage	465 GT
Hull	Aluminium, semi-displacement
Naval Architecture & Exterior Design	Trinity Yachts
Interior Design	Scott Carpenter
Guest Capacity	11 guests / 5 cabins
Crew	9
Main Engines	2 × Caterpillar 3512B, 2,250 hp
Maximum Speed	18 knots
Cruising Speed	12 knots
Range	3,500 nautical miles at 12 knots

Building a Global Superyacht Dialogue

The strongest collaborations in the superyacht industry are often forged beyond the conference stage. International summits have become the platforms where the industry's agenda is shaped, new partnerships emerge, and global networks grow stronger.

Having quickly established itself as one of the standout events on the international calendar, Superyacht Summit Türkiye (SST) is positioning Istanbul as an important stop in this global dialogue. As Yat Haber Türkiye, we spoke with Oğuz Bilgin and Çağrı Kuş, Partners of Superyacht Summit Türkiye, about the vision behind the summit, the evolving dynamics of the superyacht industry, and Türkiye's growing role within this global ecosystem.

“Consistency and originality build a community around an event.”

SUPERYACHT SUMMIT TÜRKİYE

Oğuz Bilgin | Çağrı Kuş
Partners, Superyacht Summit Türkiye

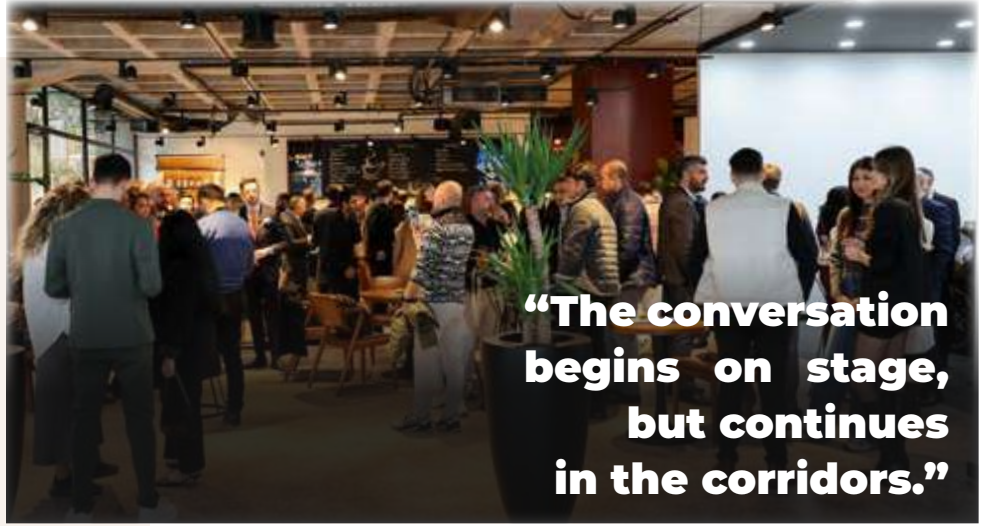

Trust and reputation in the superyacht industry are built over many years. What is the single most important factor that enables a summit to secure a lasting place on the international calendar?

Oğuz Bilgin | I would say consistency and originality. Every year, attendees need to discover something they cannot experience at another event while also making valuable new connections. Once you achieve that, a community naturally begins to form around the event. The summit evolves from being a one-time experience into a regular meeting point for the industry.

Looking at the programme, we see topics ranging from finance, design and law to technology, investment, charter and refit. Why is it no longer enough to view today's superyacht industry through a single lens?

Oğuz Bilgin | All of these disciplines are deeply interconnected. Each has its own strengths and challenges, and a regulatory change in one area can quickly impact the others. Since we're talking about an ultra-luxury industry, the ecosystem is also highly sensitive. It's simply no longer possible to understand the bigger picture by focusing on only one segment of the business.

Of course, there are conferences dedicated specifically to investment, charter, or design. Those events naturally offer more technical content and primarily bring together professionals from those particular fields. Our approach is different. We want to present every topic from a broader perspective so that even someone with no prior expertise can leave having learned something new—and perhaps inspired to explore the subject further.

“The conversation begins on stage, but continues in the corridors.”

People often say that the industry's strongest collaborations are formed between sessions rather than on stage. In your view, is the real success of a summit measured in the conference hall or in the corridors?

Çağrı Kuş | Definitely in the corridors. A conversation that begins on stage continues afterwards. That's where you meet new people and encounter different perspectives. No matter how interactive you make the sessions, communication on stage remains largely one-directional. Networking, on the other hand, is built on genuine exchange, which makes it far more valuable.

One of our biggest priorities is creating an environment where these interactions happen naturally and comfortably. If someone leaves SST having met new people and established meaningful connections, that's our definition of success.

When designing Superyacht Summit Türkiye, what do you hope participants will take home with them?

Çağrı Kuş | One of our main objectives in creating SST was to introduce Türkiye's superyacht industry to international guests and allow them to experience it firsthand. We hope visitors from abroad leave with a sense of excitement, a little surprise, and, above all, valuable new connections.

For our Turkish participants, I believe those emotions are more likely to be pride and enjoyment. Equally important is giving them the opportunity to build strong international relationships with leading figures from across the global industry.

“Delivering a fresh and original experience every year is one of the greatest challenges.”

There are numerous superyacht events held around the world. What transforms an event from just another date on the calendar into a truly unmissable gathering?

Oğuz Bilgin | For SST, it's the unique combination of Turkish and international superyacht professionals sharing the same stage, along with the distinctive experience we create in Istanbul. If people keep meeting the same faces and listening to the same conversations, an event gradually loses its appeal. One of the greatest challenges is maintaining that momentum while delivering something fresh and original every single year.

The superyacht industry has been evolving rapidly in recent years. What does the industry need most today-new technologies, new markets, or new perspectives?

Çağrı Kuş | I believe new perspectives are what will carry this industry into the future. New technologies and new markets are, in many ways, part of that broader mindset.

At a time when the largest wealth transfer in history is taking place, the industry must adapt to the expectations and preferences of the next generation of ultra-high-net-worth individuals. Buyers are becoming more experience-driven, more conscious, and more discerning. Success depends on understanding how this new generation thinks and evolving alongside them.

Other luxury sectors have adapted to these changes more quickly and have responded far more proactively. I believe the superyacht industry still has a great deal to learn from them.

It's easy to measure a summit's success by attendance figures. But how do you know when an event has truly made a lasting impact?

Çağrı Kuş | One of the strongest indicators is when people continue discussing ideas introduced at the summit long after it has ended, and those conversations unexpectedly resurface months later.

Sometimes we see participants mentioning SST during their year-end reflections. Other times, someone discussing the Turkish yacht industry-or another industry-related topic-references a point first raised at the summit. That's incredibly rewarding. When people are still talking about the event months later, we know we've created something that has genuinely stayed with them.

“The strongest relationships begin with face-to-face encounters, not emails.”

The superyacht industry is built on relationships. Why do you think people are still willing to travel thousands of kilometres for face-to-face meetings?

Oğuz Bilgin | Although the superyacht industry is smaller and more niche than many other luxury sectors, it is spread across an exceptionally wide geographical landscape. Bringing a project to life often requires people and companies from multiple countries to collaborate closely.

Yet regardless of how advanced digital communication becomes, the strongest relationships usually begin in person, not through an email. Being an excellent company is not always enough for someone to recommend you to another client or partner. Personal acquaintance and mutual trust often carry far greater weight.

Face-to-face interaction is equally important on the client side. Every superyacht buyer is an ultra-high-net-worth individual, but purchasing a yacht is never simply about having the financial means. More often than not, the decision is shaped by the connection they develop with both the seller and the yacht itself. The most effective way to build that connection is by sharing the same space, getting to know one another, and establishing genuine trust.

Shaping a DESIGN LANGUAGE

BAZ YACHT DESIGN

Bilge & Barbaros Atal

The international success achieved by the Turkish yacht industry in recent years now represents far more than manufacturing strength alone. Today, the global yachting community closely follows Türkiye not only for its world-class shipyards, skilled craftsmanship, and advanced engineering capabilities, but also for its distinctive design approach. Turkish design studios involved in global projects, winning international awards, and establishing their own creative identities across different markets are playing an increasingly visible role in the industry's evolution.

Based in Antalya, BAZ Yacht Design has emerged as one of Türkiye's most notable yacht design studios by bringing architecture and naval engineering together within a single design philosophy. Following their success at The International Yacht & Aviation Awards 2025 with the REN62, and their growing international collaborations through the recently launched ILIAD 53F OffGrid Hybrid in Australia, Yat Haber Türkiye spoke with Bilge Zaptçioğlu Atal and Barbaros Atal about their design philosophy, the future of Turkish yacht design, and the vision behind BAZ Yacht Design.

“We begin every project by focusing on the life that will be lived on board.”

You develop projects across different yacht segments, user profiles, and geographical markets. Is there a common design philosophy that connects all BAZ Yacht Design projects?

At BAZ Yacht Design, we begin every project by focusing on the life that will be lived on board. Since every owner has different expectations, habits, and lifestyle scenarios, we shape the design process accordingly.

Working on a wide range of projects-from sailing yachts and motor yachts to catamarans, new builds, and refits, both in Türkiye and internationally-allows us to develop solutions tailored to the character of each yacht, the identity of each shipyard, and the lifestyle of each owner.

This approach is also enriched by the fact that we spend a significant part of the year living aboard our own sailing yacht. Our experiences at sea directly influence many design decisions, from ergonomics and storage solutions to lighting and daily onboard routines.

While every project requires a unique response, one principle remains constant: designing timeless yachts with balanced proportions, refined details, and enduring value. For us, good design must work seamlessly in production, support real-life use, and retain its value over time.

“ We have never viewed awards as a destination. Their real value lies in seeing our design philosophy transformed into yachts that are built, launched, and followed by long-term collaborations across different parts of the world.”

Your REN62 project won the Interior Design Under 40 Metres category at The International Yacht & Aviation Awards 2025 in Monte Carlo. What changed for BAZ Yacht Design after receiving this award?

The award was certainly very valuable for us. However, the most significant outcome was the change in the nature of the international collaborations that followed. Manufacturers and investors who had previously been following our work began approaching us with concrete projects.

REN62 is one of the projects that most comprehensively reflects BAZ Yacht Design's design philosophy. Being recognized among prestigious designers from around the world confirmed that our approach resonates internationally.

Following the award, projects such as the ILIAD 53F OffGrid Hybrid completed in Australia, our interior design collaboration with an American trawler manufacturer, and ongoing discussions with European builders became natural extensions of that growing international interest.

We have never viewed awards as a destination. Their real value lies in seeing our design philosophy transformed into yachts that are built, launched, and followed by long-term collaborations across different parts of the world.

The ILIAD 53F OffGrid Hybrid presents a unique lifestyle concept centred on energy independence. What excited you most about this project?

What excited us most was being part of a holistic design approach that supports an entirely new way of living. The ILIAD 53F OffGrid Hybrid enables owners to live independently of shore infrastructure and carbon-based energy systems for extended periods. The interior had to support that lifestyle while delivering the same level of comfort and tranquillity.

This was a highly personalized interior design project developed around the owner's specific lifestyle and habits. It was particularly meaningful for us because a globally recognized production brand chose to adopt a semi-custom approach for this project. This allowed us to preserve the manufacturer's production efficiency while creating bespoke solutions tailored to the owner.

Perhaps the most rewarding outcome was that the collaboration did not end with a single yacht. Today, we are working with ILIAD Catamarans on various interior concepts for their new 60 Series. For us, a project that naturally leads to new opportunities is one of the strongest indicators of success.

How did the OffGrid philosophy influence your interior design decisions, and what were the key factors shaping the user experience?

The ILIAD 53F OffGrid Hybrid is an extremely advanced yacht from a technical standpoint. Yet our objective inside was not to showcase technology, but to create an atmosphere where users feel calm, balanced, and at ease. We wanted technology to remain a supporting element operating quietly in the background.

To achieve this, we designed an interior free from unnecessary visual clutter, emphasizing natural light, strengthening the connection with the sea, and creating a space where people would genuinely enjoy spending extended periods of time.

Making such a technically sophisticated yacht feel simple and serene inside was perhaps the project's greatest design challenge. Our goal was to make the technology almost invisible, directing the user's attention toward the sea, natural light, and the overall onboard experience.

“Many design decisions begin to take shape at sea long before they reach the drawing board.”

AEGEAN YACHT COMPANY

RATIONAL YACHTS FOR RATIONAL CLIENTS

Aegean Yacht is a seafront superyacht shipyard with 30,000 m² / 323,000 sq.ft. of facilities, combining 50 years of know-how, craftsmanship, and shipbuilding experience.

Architecture and naval engineering are different disciplines. How does approaching a project from two professional perspectives influence your design process? How do you resolve differing opinions?

In successful yacht design, architecture and naval engineering are complementary disciplines. At BAZ Yacht Design, we do not see ourselves as separate specialists working on the same project, but as two designers approaching the same goal from different perspectives. One of us focuses on space, quality of life, and user experience, while the other evaluates technical feasibility, production requirements, and performance at sea.

Of course, there are moments when we disagree. However, we see those moments as a natural and productive part of the design process. Different perspectives help us simplify ideas, eliminate unnecessary elements, and arrive at a stronger shared design language.

This approach allows us to create projects that are not only aesthetically strong but also practical, buildable, and effective in real-world conditions. Ensuring that design decisions work equally well during production and at sea remains one of our most important criteria.

Perhaps our greatest advantage is that our conversations about design continue beyond the office. We spend a significant part of the year aboard our sailing yacht, exploring different coastlines and living conditions. These experiences directly influence our design decisions. In many cases, ideas begin to form at sea long before they ever reach the drawing board.

Türkiye has become one of the world's leading yacht-building centres. Do you believe a similar rise is happening on the design side? Where do Turkish design studios stand internationally?

Türkiye's success in yacht building is now undeniable. The engineering capabilities of our shipyards, their production quality, and their ability to deliver large-scale projects have been internationally recognized for many years. We are equally encouraged to see increasingly sophisticated work emerging from Turkish design studios and to witness their growing visibility on the international stage. However, we believe there is still an important journey ahead before Turkish design achieves the same level of global recognition.

Today, Türkiye is home to highly capable design studios and shipyards that work successfully with local designers. Yet on many internationally focused projects, foreign design offices often remain the first choice. We believe that as Turkish studios continue to strengthen their international references, this balance will naturally shift, allowing Türkiye to build a design reputation as strong as its manufacturing reputation.

The ILIAD 53F OffGrid Hybrid represented an important milestone in this respect. A Turkish design studio being selected by an Australian manufacturer and an international owner to design the interior of a yacht built outside Türkiye was a direct reflection of the confidence placed in our design approach and international relationships.

For many years, yachts designed elsewhere in the world were built in Türkiye. Today, we believe it is equally important to see designs created in Türkiye being built around the world. Through the ILIAD 53F OffGrid Hybrid, we are proud to have contributed to this shift and to be among the studios bringing Turkish design to global markets through international manufacturers.

Our headquarters are in Antalya, and while we remain closely connected to Türkiye's strong production culture, our presence in Hamburg allows us to maintain close relationships with the European market. This dual perspective helps us better understand both manufacturing realities and international expectations.

“Seeing designs created in Türkiye being built around the world is an important milestone for our industry.”

From artificial intelligence and sustainable materials to changing lifestyles and evolving owner expectations, many forces are reshaping yacht design. What do you think will have the greatest influence over the next decade?

We believe the next decade will not be defined by a single technology, but by the convergence of multiple transformations. New generations of owners value independent living, longer stays on board, and spaces that adapt to their personal lifestyles just as much as they value aesthetics. This shift influences every aspect of yacht design, from energy systems and interior layouts to materials and production methods.

Sustainability has evolved beyond material selection alone. Hybrid and electric propulsion systems, energy efficiency, durable materials, and manufacturing technologies such as 3D printing are reshaping both design decisions and production processes.

We see artificial intelligence as a powerful tool that supports the design process. It accelerates research, visualization, and communication while providing valuable assistance to design teams. However, yacht design ultimately involves creating a product that can be built, function at sea, and respond to real human needs. For that reason, architecture, engineering, and practical experience will remain the foundations of design in the future.

Technology will continue to evolve. The defining factor of great yacht design, however, will always be the ability to understand people, the sea, and the realities of production simultaneously.

■ **What is the biggest goal for BAZ Yacht Design today?**

We do not define success through the number of projects we complete, the size of the yachts we design, or the awards we receive. Our primary goal is to maintain a consistent BAZ Yacht Design language while working with different manufacturers and across different markets.

As a design studio based in Antalya, contributing to Türkiye's strength in yacht building through design remains one of our greatest motivations. Working with manufacturers around the world is important to us, but in the long term we would also like to see Türkiye recognized not only for its production capabilities, but for its strong design brands as well.

If, in the coming years, more Turkish design studios collaborate with international manufacturers and more designs originating from Türkiye find life in different parts of the world, being part of that transformation would represent one of BAZ Yacht Design's greatest achievements.

CANNES YACHTING FESTIVAL

The Global Yachting Season Opens on the French Riviera

Held every September on the French Riviera, the Cannes Yachting Festival is one of the most important gatherings on the global yachting calendar, marking the opening of a new season. With a history spanning nearly half a century, the event brings leading manufacturers, design studios, brokers, equipment suppliers, and yacht owners together on a single platform, while new models, technologies, and the industry's vision for the future are unveiled to the international yachting community.

Taking place from 8–13 September, the 49th edition hosts Europe's largest in-water boat show across the Vieux Port and Port Canto marinas. More than 680 exhibitors are taking part, with over 700 boats on display and approximately 150 world premieres presented to visitors. Spanning motor yachts, superyachts, performance sailing yachts, and catamarans, this diverse line-up makes Cannes more than just the first major show of the season; it also positions the festival as one of the strongest reference points for understanding the trends shaping the global yacht industry.

Held ahead of the Monaco Yacht Show, Cannes serves as a strategic launch platform for manufacturers. Many brands choose the festival to unveil new models developed throughout the year for the first time, while changes in design philosophy, engineering solutions, and new approaches to evolving owner expectations are showcased alongside them. In this respect, the festival offers important insights each year into the direction the industry is likely to take in the months ahead.

Innovation is at the heart of the key themes emerging at the 2026 edition. Electric and hybrid propulsion systems, solutions aimed at improving energy efficiency, alternative materials, and digital technologies are no longer associated with a specific product category; they have become fundamental elements of the industry's broader transformation. Held for the second time as part of the festival, the Innovation Route brings together projects focused on sustainable technologies under a dedicated route, while the Innovation Route Awards recognize outstanding solutions in environmental responsibility and engineering. This approach demonstrates that Cannes has evolved beyond being a showcase for new yachts, becoming a meeting point for ideas that are helping shape the future of the yachting industry.

TÜRKİYE AT CANNES

The Turkish Yacht Industry on the Global Stage

The Cannes Yachting Festival, one of the most important gatherings in the global yachting industry, once again provides a platform for the strong international presence of the Turkish yacht sector. The festival's official exhibitor list includes 14 Turkish companies, representing a broad spectrum of the industry, from yacht building and marina management to marine electronics, textile solutions, brokerage, and consultancy services.

Having strengthened its position in international markets through its engineering capabilities, production quality, and export performance in recent years, Türkiye sees Cannes not only as a platform for presenting new models, but also as a strategic meeting point for reinforcing the global brand value of its companies.

Turkish Builders Making World Premieres

Turkish companies presenting world or European premieres at the show are among the most anticipated launches of the event.

Sirena Marine – Sirena 118: At 36 metres, the largest model ever developed by the brand, this semi-custom superyacht stands out as one of the most exciting world premieres at the show. Designed by Germán Frers and Cor D. Rover, the Sirena 118 showcases the level Turkish engineering has reached in the superyacht sector.

Numarine – 27XP (World Premiere) and 40MXP (European Premiere): Continuing its strong presence in the explorer segment, Numarine responds to growing demand for long-range exploration yachts with the new 27XP, while presenting its flagship 40MXP in Europe for the first time at Cannes.

AvA Yachts – Kando 85 Explorer (First Hull “V”): Developed by the Antalya-based shipyard, the steel-and-aluminium explorer yacht attracts attention with its robust construction developed for ocean cruising and its high level of craftsmanship.

AIATA Boats – Wayfinder 38: Standing out with its modular design concept, the Wayfinder 38 can be adapted to changing owner requirements even after delivery, allowing cabins to be added or removed. Its fully customizable architecture makes it a notable example of Turkish design and innovation.

Bering Yachts – Bering 88 and Bering BC60: Continuing its expansion in the explorer segment, Bering presents the world premieres of the Bering 88 and the aluminium Bering BC60, while also unveiling the 50-metre Bering 165 project for the first time under its newly established Bering Superyacht Division.

Other Turkish Exhibitors

In addition to the world premieres, numerous companies representing the broader Turkish yachting ecosystem will meet international visitors at the Cannes Yachting Festival.

Company	Area of Activity	Location at the Show
Fabbro Yachts	Luxury motor yacht production (F45 Cabrio / F33 Coupe)	Quai Saint Pierre
Ege Yat	Custom yacht building and refit	Palais des Festivals
D-Marin	International marina management	Jetée Nord 154
Yat Brokerleri Derneği	Yacht brokerage services	Port Canto / Broker102
Atlas Yatçılık	Yacht agency, flag registration and consultancy	Palais des Festivals
Mercan Tekne	Watersports, cruising, fishing and custom-built boats	Motor Boat Marina
iHOY Elektronik	Smart marine electronics (iHoy Captain)	Pantiero
Atölye 99	Custom textile and interior solutions	Palais des Festivals
Fantom Yatçılık	Marine products and services	Quai Max Laubeuf

The presence of Turkish companies in Cannes extends far beyond world premieres. This broad ecosystem—from design studios and equipment manufacturers to system suppliers and marina operators—is participating in the festival to develop new international partnerships and expand export networks. Today, Türkiye is recognized as one of the global yacht industry’s leading production centres not only for its strong manufacturing capacity, but also for its expertise in design, engineering, and high-value-added projects.

With a history spanning nearly half a century, the Cannes Yachting Festival continues to be much more than the first major showcase of the new season. It remains one of the most influential gatherings shaping the future of the global yachting industry. Every new model displayed on the French Riviera, every partnership established, and every technology introduced offers valuable clues about the industry’s next direction.

The Turkish yacht industry, meanwhile, continues to strengthen its position among global players, supported by a powerful ecosystem that extends from world premieres and advanced engineering to high-value-added manufacturing.

2026 | 14–18 OCTOBER | BODRUM PORT

200+ boats | 500+ brands

Taking place at Bodrum Port from 14–18 October, Bodrum Boat Show brings Türkiye's yachting market together with regional and international professionals, spanning yacht and boat brands, brokerage and charter companies, marina operators, and marine equipment providers.

Bodrum Boat Show returns to Bodrum Port for its 2026 edition. Alongside motor yachts, superyachts and sailing yachts, the show will feature marine engines, equipment and accessories, water sports, diving and fishing products. Manufacturers and distributors will be joined by brokerage and charter companies, marina operators and marine service providers.

More than 200 boats and over 500 brands are expected to participate in the 2026 edition. This scale extends the show's role beyond boat display, bringing different industry stakeholders together on a common platform for sales, business development and professional networking.

The Bodrum Factor

One of the key elements shaping the character of the show is its location. Situated in the city centre, Bodrum Port connects the exhibition area directly with restaurants, cafés and the town's social life. As a result, the show experience is closely integrated with Bodrum's distinctive coastal atmosphere.

Bodrum's location between the Aegean and the Eastern Mediterranean further supports this positioning. Alongside Türkiye's strong yacht-building infrastructure, Bodrum is one of the key centres of the region's charter, marina and yacht ownership ecosystem, giving the show a natural regional gateway.

From Exhibition to Business

The visitor profile of Bodrum Boat Show also reflects this commercial focus. In addition to yacht owners, prospective buyers and investors, the professional audience includes brokers, charter professionals, marina representatives and equipment suppliers.

From this perspective, the development of the show cannot be measured solely by the number of boats on display. Its ability to create a meeting platform where different stakeholders from Türkiye's broad ecosystem of yacht building, design, charter, refit and marine services can establish new connections further strengthens its regional value.

Bodrum itself is also an integral part of the experience. The social life around the port brings professional meetings and the destination experience together within the same flow, transforming the show from a conventional exhibition into a broader yachting and maritime gathering.

MEGA YACHT TRANSPORT

The Logistics Behind a Yacht's Journey

In a global market where yachts move between production centres, refit shipyards, seasonal cruising grounds, and different charter destinations, transporting these vessels safely and on schedule requires a specialized area of expertise. Mega Yacht Transport has been focused on this field since 2009.

The company is built on the founding team's nearly 30 years of experience in maritime transportation.

This expertise is applied to yacht logistics, where factors such as size, weight, structural characteristics, route, and delivery schedule must all be assessed together.

Mega Yacht Transport's service portfolio covers a wide range of vessels, from megayachts to motor and sailing yachts, catamarans, and high-speed craft. The company also transports passenger vessels, ferries, military and coast guard boats, fishing vessels, tugboats, firefighting and workboats, as well as service boats and pontoons.

Every project has its own specific requirements.

Route planning, selection of the transportation method, loading and unloading operations, customs procedures, and final delivery all form part of the same plan. With the ability to combine land and sea transportation, the company manages the entire process under a single coordination structure.

Supporting this operation is an international network of 30 agents across different regions of the world as of 2025. Established through local partnerships, this network facilitates the coordination of operations at different ports while enabling Mega Yacht Transport to maintain its boutique service approach on a global scale.

Yacht transportation extends far beyond delivering a vessel from its builder to its owner. Logistics support is required at many stages throughout a yacht's lifecycle, including post-build delivery, seasonal relocation, transfers to shipyards for refit or maintenance, and moves to different markets following a sale. Transportation is therefore an area of expertise that remains constantly active in the background of a yacht's lifecycle.

With 17 years of experience in yacht transportation and a network of 30 agents, Mega Yacht Transport operates at the heart of this global mobility, managing the journey from route planning to final delivery and tailoring each stage to the specific requirements of every vessel.

Bellini Yacht Enters Türkiye with Korlas Marine

Italian yacht builder Bellini Yacht is expanding its international dealer network with Korlas Marine as its partner in Türkiye. Under the agreement, Korlas Marine will serve as Bellini Yacht's exclusive distributor in Türkiye, handling both sales and after-sales services.

The partnership enables Bellini to strengthen its presence in Türkiye through a dedicated local commercial structure while adding a new market to the brand's growth strategy in the premium yacht segment. With its strong manufacturing infrastructure, growing yacht ownership culture and strategic location at the heart of the Mediterranean, Türkiye is becoming an increasingly important market for international yacht brands.

Bellini Yacht's first major showcase in Türkiye will be the Astor 38. The model will meet the Turkish yachting market at the Bosphorus Boat Show, taking place at the Istanbul Expo Center from 20–27 February 2027. Following the dealership agreement, the event will mark Bellini Yacht's first physical launch in Türkiye.

Francesco Frediani, Director of Dealer Network at Bellini Yacht, views Türkiye as a strategically important market for the premium yacht segment. According to Frediani, Korlas Marine's experience in the local market will be a key factor in supporting Bellini's growth ambitions in Türkiye and the wider region.

Korlas Marine's appointment creates a structure that extends Bellini Yacht's commercial presence in Türkiye beyond sales operations. The fact that after-sales services will also be managed through the same network underlines the brand's long-term commitment to establishing a strong position in the market.

The Astor 38's launch in Istanbul will mark the first step in this new chapter. Türkiye's role in Bellini Yacht's international growth strategy and the customer network the brand will build in the country will be among the key developments to watch in the coming period.

A New Era at D-Marin InfraVia to Acquire Premium Marina Network

D-Marin, one of the Mediterranean's leading premium marina operators, has announced that its shareholder, CVC, has reached an agreement to sell the company to InfraVia, a European independent private equity firm. Upon completion of the transaction, InfraVia will become D-Marin's new owner, working alongside the existing management team.

Since its acquisition by CVC in 2020, D-Marin has expanded its marina network across the Mediterranean while investing in infrastructure upgrades, digital transformation initiatives and customer experience enhancements. The new partnership is expected to support the continuation of the company's long-term investment strategy and the further development of its premium marina portfolio.

As part of the transaction, InfraVia plans to support investments in marina infrastructure, the enhancement of digital capabilities and projects aimed at further improving customer experience. With a strong track record in transport, maritime and leisure infrastructure investments, the firm is also expected to support D-Marin's selective growth strategy.

D-Marin CEO Oliver Dörschuck stated that InfraVia's vision aligns closely with the company's customer-centric approach and commitment to enhancing the yachting experience. He also noted that D-Marin's partnership with CVC played a significant role in the company's development and growth over recent years, adding that the new ownership structure is expected to accelerate its future expansion plans.

InfraVia CEO Vincent Levita described D-Marin as one of the Mediterranean's leading premium marina platforms, highlighting its strong brand, high-quality marina portfolio and customer-focused service approach. Levita added that InfraVia aims to build on the solid foundation established during CVC's ownership and support the company's long-term growth trajectory.

Subject to the required regulatory approvals, the transaction is expected to be completed during 2026.

EXTRA Yachts Enters the Turkish Market

Italian motoryacht builder EXTRA Yachts has officially launched its operations in Türkiye, expanding its presence in the premium motoryacht segment. Part of the Palumbo Superyachts group, the brand will now offer its range of yachts-known for spacious living areas, long-range cruising capabilities and efficient hull designs-to Turkish owners and enthusiasts.

The brand's representation in Türkiye is led by Selim and Selen Özgörkey, while benefiting from the engineering expertise and more than 60 years of shipbuilding experience of Palumbo Superyachts. The group's portfolio also includes the yacht brands ISA Yachts, Columbus Yachts and Mondomarine.

EXTRA Yachts' model lineup comprises the Fast, Triplex, Shadow and Global series. Models available in the Turkish market include the X56, X90, X110 and X130 Fast, the X100 and X130 Triplex, the X70 Shadow and the X145 Global.

Designed around generous interior volumes, strong connections to the sea and a lifestyle-oriented approach that supports extended time on board, EXTRA Yachts aims to offer a distinctive alternative within Türkiye's premium motoryacht market.

iHoy Expands Global Footprint with Two New Operational Hubs

Turkish marine technology company iHoy has expanded its international presence with the launch of two new operational centres in North America and Europe. As part of its global growth strategy, the company has opened its first physical sales and technical support office in Florida while also establishing a new European hub in Poland.

Recognised for its high concentration of recreational boating activity and extensive marina infrastructure, Florida will serve as the centre of iHoy's North American operations. The new office will provide product sales and technical support services, enabling the company to respond more quickly and directly to customers across the region.

In Europe, iHoy's new Polish facility will manage sales, distribution and logistics operations under one roof. Through this investment, the company aims to offer shorter delivery times and enhanced after-sales support to customers throughout the European market.

At the core of iHoy's international expansion are its digital marine technology solutions. iHoy Captain, which combines autopilot control and advanced navigation functions within a single application, has been developed primarily for motorboats and fishing vessels up to 15 metres in length. The platform's integrated charting solution, iHoyMap, provides access to official electronic navigational charts through partnerships with authorised hydrographic institutions in the United Kingdom and Germany.

As the only company in Türkiye authorised to provide official Electronic Navigational Charts (ENCs) for vessels operating outside the scope of SOLAS requirements, iHoy aims to bring its domestically developed marine technologies to a broader international audience through its new investments in Florida and Poland.

D-Marin Strengthens Its Presence in Sardinia with Olbia Marina

Premium marina operator D-Marin has expanded its Mediterranean footprint with the acquisition of Olbia Marina in Sardinia. The transaction, which includes Marina di Olbia Yacht Service (MOYS) and Molo Brin, further strengthens the company's Italian marina network while reinforcing its position along a key yachting corridor linking Sardinia with the French Riviera and mainland Italy.

Olbia Marina offers 270 berths for yachts of up to 150 metres in length, supported by advanced refuelling infrastructure and a strategic location close to some of the Mediterranean's most popular cruising destinations, including Costa Smeralda. D-Marin's digital services and integrated marina network will also be made available to customers at the facility.

D-Marin CEO Oliver Dörschuck described the acquisition as an important step in the company's long-term growth strategy across the Mediterranean.

With the addition of Olbia Marina, D-Marin further expands its network across nine countries and aims to provide yacht owners with a seamless service ecosystem connecting Sardinia, mainland Italy and the French Riviera.

RMK Yachts Strengthens U.S. Presence with New Miami Office

RMK Yachts, one of Türkiye's leading superyacht builders, has expanded its international footprint with the opening of a new office in Miami as part of its global growth strategy. Operating within the RMK-Merrill Stevens shipyard facility, the new office will provide direct support for customer relations and after-sales services in the U.S. market.

Located in one of the world's most important hubs for the superyacht industry, the Miami office is intended to strengthen RMK Yachts' relationships with U.S.-based yacht owners, brokers and industry partners. The company aims to combine its expertise in yacht design, engineering and project management with a local presence, enabling faster and more efficient service for clients in the region.

The collaboration with RMK-Merrill Stevens, a well-established specialist in superyacht refit and maintenance services, represents a significant step in enhancing RMK Yachts' operational capabilities in North America. The new office will support a wide range of activities, from pre-sales consultations and project coordination to warranty and after-sales services.

The Future of the Superyacht Ecosystem Discussed in Istanbul

The 4th Super Yacht Türkiye 2026 Conference, organised by Mare Forum in Istanbul, brought together key stakeholders from across the superyacht industry to assess Türkiye's current capabilities and future potential within the sector. Representatives from shipyards, marina operators and industry organisations participated in discussions covering a range of topics, with refit infrastructure, skilled workforce development and marina capacity emerging as key themes.

During the conference, speakers highlighted that Turkish shipyards have developed the technical capabilities required to undertake large-scale refit projects. It was also noted that further improvements in financing mechanisms and regulatory processes could significantly strengthen Türkiye's competitiveness in the global refit market.

Participants pointed to the progress made in workforce development in recent years, while emphasising that increasing the number of professionals holding internationally recognised certifications will be essential to ensuring the sector's long-term and sustainable growth.

The growing demand for superyacht berths was another major topic of discussion. While existing marina capacity was considered insufficient to meet future demand, participants agreed that new marina investments could further reinforce Türkiye's position as a key yachting destination in the Mediterranean.

The conference also featured contributions from leading industry figures. Piraye Şahinkaya Orhun, Yacht Projects Director at ARES Yachts, moderated the session on design and innovation, while TYBA Vice President Noyan Mutlugil shared insights into changing customer expectations and the impact of a new generation of yacht owners on the industry.

Yacht Zone Brings Anytec's New A28-T to the Turkish Market

Yacht Zone, the Turkish representative of several premium boating brands, has added the new Anytec A28-T to its portfolio. Unveiled in Stockholm, the model becomes the latest addition to the Swedish aluminium performance boat builder's lineup and further expands Yacht Zone's offering in the Turkish market.

Developed as the successor to the award-winning Anytec 860-T, the A28-T combines the company's expertise in aluminium hull construction with updated design and engineering solutions. Key enhancements include a redesigned hull geometry, a new T-top structure and a driver-focused cockpit layout.

Engineered to meet the demanding conditions of Scandinavian waters, the A28-T has been designed to deliver a combination of performance, safe handling and user-friendly ergonomics. An optimised deck arrangement and functional onboard spaces further enhance the boat's versatility, making it suitable for both everyday boating and high-performance cruising.

The launch event in Stockholm brought together industry professionals and business partners, with representatives from Mercury Marine and Simrad also in attendance. Guests had the opportunity to explore the new model in detail and experience its capabilities on the water.

With the addition of the A28-T, Yacht Zone continues to strengthen its premium boat portfolio in Türkiye while introducing local customers to Anytec's approach to combining performance, durability and functionality in a single platform.
